Suction lance kit "FLOAT", Art No 39489

Background

We have the last year been searching for a more stable and reliable suction lance and level switch for our VCC II unit.

After some testing, we are now ready to launch the suction lance kit FLOAT. It is a very simple and reliable function and keeps the suction line to a minimum of leaking possibilities. At the same time, the level switch can be changed separately. All the parts on the lance is "tear-and-wear" parts and must be changed with a certain interval depending on chemical product.

Please, see picture in page 2.

Measures

From July 2016, all new VCC II units will be equipped with the new version of lance kit. The kit can also be ordered to replace old models and an instruction how to do, is included.

It will not affect the price and it will be delivered as standard.

Article number is clearly stated in the manual.
