

Product/Maintenance information no. 2016-3

Date: 2016-10-20
Implementing date: 2016-10
Created / Approved by: Martin Johansson

Announcement concerning all products in VMS II and CDE II series.

Background

Having a distance between the wall and the satellite station is, from a hygienically point of view good, and has been discussed for a while.

The distance should be at least 5 mm from the wall, to enable an easy access and rinse, between wall and satellite station, during the cleaning process.

Measures

The decision has been made to implement this into the SS cabinet (not a loose part) and the delivery of the new version will start during October 2016.

At the same time, the measurements between the fixing holes (internally) will be changed according to attached drawing.

This will of course mean that the satellites media connection will be additional 5 mm from the wall but should not cause any problems due to in house testing.

Concerning satellites of VMS II-T and Combi models, the change will be implemented during Q1 2017.

If you have any questions, please contact us.
