

Product/Maintenance information no. 2017-1

Date: 2017-10-10
Implementing date: 2017-10-01
Created / Approved by: Martin Johansson

Announcement concerning all products containing Grundfos MGE motors.

Background and Measures

Over time, there has been opinions saying that it is not optimal having two control systems in one unit. The MGE motor and the PLC (Crouzet Millenium) has been working together in order to obtain all functions that we demand in our products.

Then new generation of MGE motors with display, is capable of doing everything we need, and also making it a lot easier to overview and trouble shoot, if necessary.

So, the only thing needed to hook up to the complete system will be the PC-Tool kit.

Please, see Pic 1 and 2 as an overview of the display and shown values.

Secondly, after a market demand for a big 20-25 bar single pump (SB), we will extend the 20 series with the LWP 20300 SB (300 lit/min = 10 sim. user)

We will also start using the 300 pumps as the base in our Multi series, giving the steps 20300, 20600 and 20900.

LWP Multi 20200, 20400 and 20600 has been taken out of production, so please, update all offers to you customer containing these units.

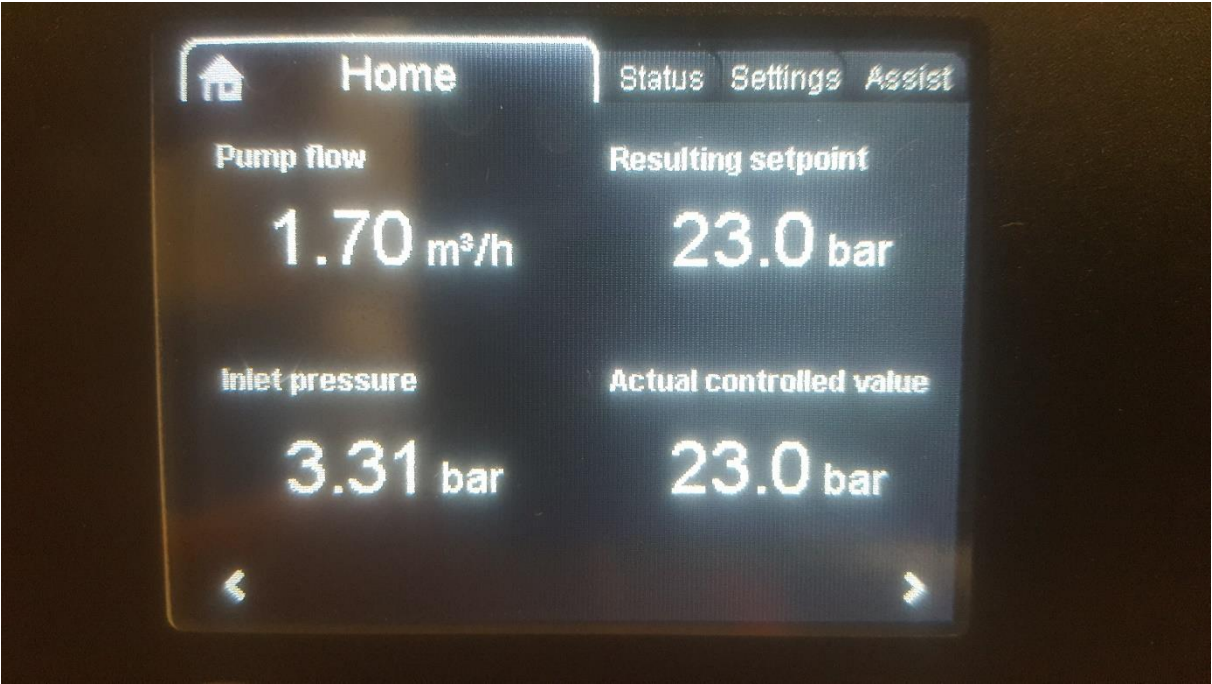

If you have any questions, please contact us.
